

GIT & GITHUB HANDS-ON ASSIGNMENT

Build Your GitHub Developer Profile with Markdown (PART 1).

Hands-on Exercise

Task 1 — Create Your Repository

1. Create a folder locally named exactly after your GitHub username. For example, if your username is alex, the folder should be named alex.
2. Open the folder on vscode
3. Run git init in your terminal to initialize git in your folder
4. Create a new file within the folder called README.md
5. Add this into the file

```
# Your Name
```

```
Hello! I am **Your Name**.
```

```
## About Me
```

```
Write a short introduction about yourself here. (write in your own words)
```

6. Click save (CTRL + S) and then using git commands (add, commit), commit this file with the changes using the commit message “Add developer profile README”
7. Create a repository on github (same name as your folder which is the same as your github user name)
8. Push your existing local repository to github
